RESIDENTIAL
FENCES

The garden doesn't need large glazings – instead of letting in light, you can let in more LIFE. Beautiful surroundings are the context in which your well-kept garden gains a whole new dimension. By choosing fences based on light or even openwork structures, you open yourself up to the surroundings. For this, we particularly recommend **Home Inclusive fences** – delicate in design and focused on protection without concealment.

They say any TV set can be replaced by a garden. In addition to the view, more natural light in every room simply looks better in nature. **patio doors** or stunning **fixed glazing**

Clearly, brighter is better

We live better in bright interiors. We have more pleasant natural light. We warm rooms with sunlight and make the most of daylight hours. How do you turn what separates the house from light into an element that connects the interior with nature?

with large windows overlooking the landscape, more light also enters the interior, and more natural light. You can choose **functional lighting solutions**.

Doors and the hallway. An underestimated space, yet it's the very first one we encounter. Side lights, toplights, and glazings are a solution for an overly dark vestibule and a great way to add character to the entrance. Glass visually widens or raises the entrance and – of course – lets in more light. Instead of visually enlarging the door, you can choose something larger right away – **the PIRUE door with a pivot hinge**. It is a good way to create a truly great entrance.

The garage may not immediately come to mind as a place to spend time with family. Men, however, often see it differently – for them, it's a space they like and want to spend time in. For many reasons, garages usually have small windows and are therefore quite dark. How can you let more light inside while also enhancing the garage's external appearance? The solution is **a garage door with the HORIZON panel**. Want it even brighter? How about LED lighting under the tracks and the door crossbar, integrated with the automation system? During the day, the garage gains more natural light, and after dark, efficient LED systems help illuminate the interior.

Smart solution – WIŚNIOWSKI Connected

The first **garage door that's smart as standard...**
and much, much more!

WIŚNIOWSKI garage doors with the SPARK drive unit are the first garage doors that are smart as standard. Download the free app and... control them from anywhere in the world – using only your phone or tablet. More specifically: WIŚNIOWSKI is the first manufacturer in Poland to offer an automatic garage door that allows **remote control** via an app. The Wi-Fi protocol used by the SPARK drive unit means no additional smart home central control unit is required.

WIŚNIOWSKI Connected includes more than just garage doors. Our windows, roller shutters, doors, and entrance gates are also SMART as standard.

- Convenient control of garage doors, gates, roller shutters, and doors via one app
- Smart solutions as standard – no extra cost
 - Simple and quick setup
 - Remote control and monitoring
- Security and protection of your home
 - Easy sharing

BESTSELLER. UniTherm automatic sectional garage door

UniTherm is a garage door designed with demanding energy-efficient and passive buildings in mind. The warm structure of the INNOVO panels will allow you to lower your heating bills – UniTherm is over 20% warmer than the market standard!

Thermal insulation is important, but with UniTherm, we also emphasize that a garage door must provide **full safety**. That's why standard equipment includes an overload safety device, a safe panel shape, panel joint covers, and optional photocells. **Looking for a garage**

door for years to come? UniTherm is an excellent choice, because one of its key components – the torsion springs – is designed for as many as 20,000 cycles (opening and closing)! With four cycles per day, this means up to 14 years of reliable operation.

Excellent thermal insulation
0.33 W/m²K

Unique design.

PRIMO Slide

What is the PRIMO SLIDE patio door?

It combines the advantages of HST and PSK systems: a product with high technical performance at an attractive price, dedicated to people who value **comfort and quality**.

How does it work? Slide is a fusion of the best features of the HST and PSK systems. When opening, the leaf slides on carriages along the window line, so no additional space is required, unlike with tilt-and-turn windows or doors.

It works particularly well as a **kitchen window** – for example, when a tap interferes with easy opening of the leaf. Yes, that's right! PRIMO Slide doesn't have to be a typical patio door installed at floor level.

BESTSELLER. PROTECTA roller shutters

In this issue, we write a lot about letting light into the home – but sometimes, we really want to shut it out. Lowered roller shutters make interiors darker, quieter, and even a bit more secure.

And that's not all – automatic PROTECTA roller shutters can also deliver noticeable **savings on heating and air conditioning** throughout the year. Hot summers, snowstorms, oppressive rain hitting the windows in autumn – all this makes more and more people decide to equip their windows with external roller shutters in order to protect the house from

the weather conditions and provide more peace and quiet and respite for the household members. Everyone knows that external roller shutters protect the interior against excessive heat in the summer and cooling in the winter, but they also have other functions, including providing additional **protection against burglary.**

WINDOWS WITH AUTOMATIC ROLLER SHUTTERS ALWAYS GIVE YOU JUST AS MUCH LIGHT AS YOU NEED. **BUT THEY ALSO PROTECT YOUR PRIVACY, MINIMIZE NOISE, AND RESPOND TO YOUR NEEDS.**

Doors inspired by movement – PIRUE

The pivot technology is based on an innovative hinge system that allows the door to **move smoothly** – even in the case of large and heavy structures. This solution is a great choice for doors with really large dimensions. In spite of the size, the pivot door moves **lightly and smoothly**.

Pivot doors can not only be significantly larger than typical external doors, but they also feature one characteristic that amazes some and surprises others. **Pivot hinges** are an element that has been featured more and more frequently at design fairs in recent years. They have gained recognition among designers and are now becoming part of an ever-growing number of homes. The PIRUE door revolutionizes the previous perception of the building entrance, combining unconventional solutions, functionality, aesthetics, and unique design.

What counts is...
every detail!

Every detail matters – and in the case of the NOVA doors, this principle is the foundation of their quality, safety, and aesthetics.

The NOVA Retro doors look like designs from years past when viewed from the outside. Everything else, however, sets them apart from their classic predecessors. We complement retro styling with **modern materials** and a contemporary approach to safe and functional external doors. This line was created not only for the renovation of older buildings. It will also appeal to **fans of vintage and retro styles** who want to finish their brand-new homes in this distinctive way.

Unlimited possibilities.

INFINITY

*"In recent years, we have seen a clear **return to vertical spans in fence design**. This is driven primarily by the visual needs of investors, who are ever bolder in choosing modern forms for their dream buildings. Thanks to an aesthetic based on symmetry and rhythmic repetition, vertical fences fit perfectly into **minimalist trends**, giving the property cohesion and a sense of lightness,"* says Łucja Obrochta-Rzepka, designer and architect at WIŚNIEWSKI.

SMART product

BESTSELLER. Your private parcel locker. **MultiBox**

A fence does not only protect you from the outside world, but also connects you to it! The MultiBox is your **private parcel locker** that will receive your parcel even when you aren't home. Discover the multitude of options it offers.

For several years now, people in Poland have been buying and ordering more and more online. MultiBox helps them receive it all conveniently and securely. MultiBox is a unique fence post that integrates **a letterbox, a parcel compartment, a video door phone, and a code keypad**. With it, you don't have to worry about receiving deliveries while you're away from home. Using a one-time access code, the courier can safely place the parcel in the compartment, and you can collect it at a time that is convenient to you.

MultiBox is not just a modern fence element, but above all a practical solution. It makes parcel collection hassle-free, and your property gains both functionality and aesthetic appeal. Whether you shop online frequently or simply want to increase everyday comfort, the MultiBox is an investment that pays off.

INFINITY. A return to classic style with a modern twist

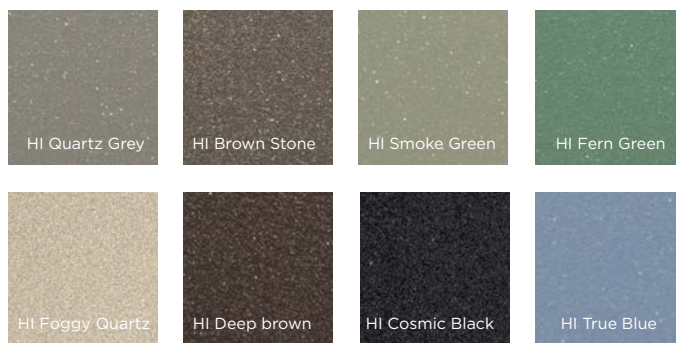

The INFINITY collection is the quintessence of minimalism and elegance. Its palisade segments harmoniously combine to form a consistent line without the need to use any posts. It is a solution that allows you to **achieve the effect of an uninterrupted fence**, highlighting the modern character of the property. Vertical profiles create a harmonious composition that does not isolate the space from its natural surroundings. Combined with a white concrete base and a modern building façade, the whole design appears exceptionally aesthetic and cohesive. In the INFINITY collection, palisade segments are joined together without the use of posts. This solution not only simplifies installation, but above all, makes it possible to create a continuous fence effect.

the INFINITY collection

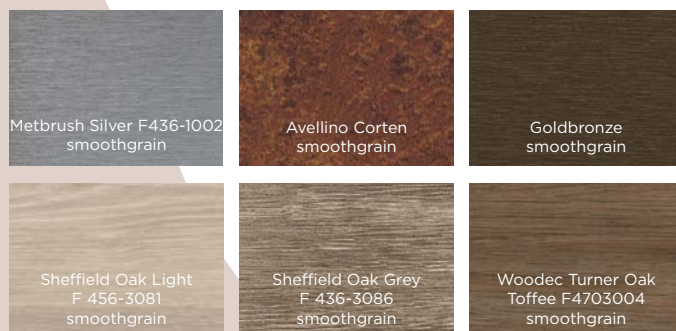

Aesthetic perfection in every detail. **2026 trends**

Hybrid **materials**

The year 2026 will bring a **warming of the colour palette**. The trend of integrating wood, aluminium, composite materials, and more will continue to grow, combining aesthetics, durability, thermal insulation, and a low carbon footprint. Earthy, natural tones inspired by nature will dominate – clay, terracotta, ochre, sandy beige, muted green, and sky blue. Cool greys will give way to so-called “new neutrals” – colours with a touch of warmth that create a sense of **cosiness and harmony**.

In architecture and joinery, natural materials and finishes will gain popularity: warm wood, brushed metal, and sandblasted stone. Colours will feature organic transitions and matte textures, emphasizing calm, balance, and the sustainable character of spaces.

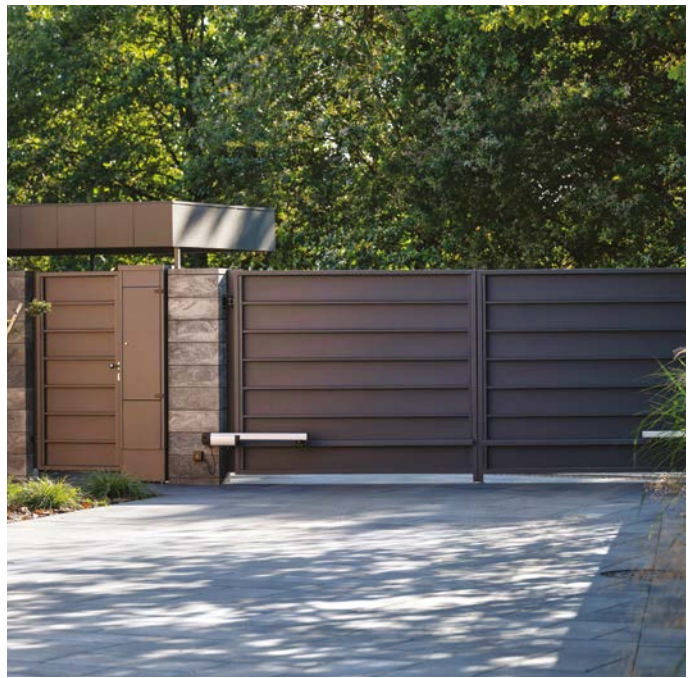

Technology **integration**

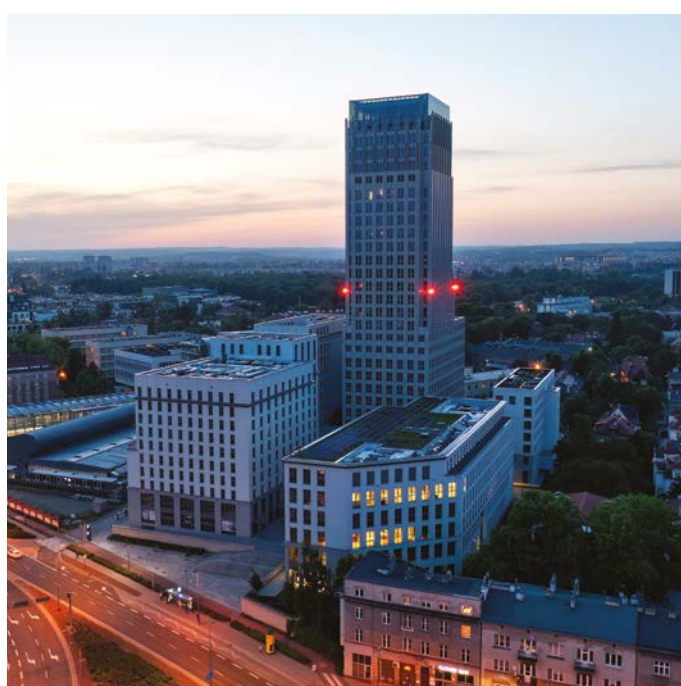

In 2026, joinery will increasingly become part of integrated smart home systems. Voice and remote control, as well as integration with air quality sensors and energy-efficient systems, will become more widespread. Modern technologies will enable **full automation of functional features**, increasing comfort, safety, and the energy efficiency of buildings.

Product personalization – joinery tailored to lifestyle, location, ambience of the surroundings, and the character of the building.
